

## Discover simplified, centralized payment management.

Streamline your hospitality business operations and improve guest satisfaction.

Global Payments, together with 3C Payment and Planet, understands that your hospitality business has many moving parts that all play a critical role in your success. We help ensure your business is equipped with secure payment technology compatible with your property management system (PMS), so you can focus on guest experiences and spend less time on reconciliations.

3C Payment's software, 3C Integra, allows full integration with Oracle Hospitality. It addresses the unique needs of your front desk and on-site restaurant business, without requiring separate platforms.

Guests will enjoy not having to pay for their stay or incidental charges until check-out. You will enjoy streamlined reconciliation at the end of the day and reduced PCI scope thanks to advanced card data storage features.

**Integrate with Oracle Hospitality PMS Systems** — Secure, PCI-compliant payment acceptance, accurate billing, payment tracking, and back-end financial reconciliation.

**Attract international customers** — Provide guests with the convenience of paying in their home currency with dynamic currency conversion.

**Speed guest check-out** — Securely tokenize guests' card data for incidental top ups and fast track checkout with their original card for a frictionless payment experience.

**Seamless installation process** — 3C Payment's experience working with top hotel brands worldwide means you'll benefit from a smooth set-up and installation to get you up and running quickly.

## Hospitality businesses of all sizes benefit from the Planet 3C solution.

### 3C Pay@Reception

- 3C Integra terminal software integrates with Oracle Opera version 5.5, via Oracle Payment Interface (OPI).
- Supports EMV contactless payment transactions.
- Preauthorize transactions at guest check-in.
- 3C Vault securely tokenizes and stores transaction data.
- Retrieve tokenized cardholder data at checkout for incidental charges and pre-authorizations.
- Dynamic currency conversion allows cardholders to pay in their home currency.

### 3C Pay@Table

- Integrated to Symphony 2.7 (or later), portable terminals can recall the list of open bills by table ID.
- Supports tip functionality and dynamic currency conversion.
- Split bill capability with automatic payment continuation enables flexible table management.
- PCI P2PE validation means no sensitive payment card data enters the POS.

### Reporting

Get online access to every transaction detail, from every location, in one place. The 3C Portal features:

- **User Management** — Create user access with various permission levels based on your business' requirements.
- **Refunds and reversals** — Perform reversals for refunds, pre-authorizations, and authorizations.
- **Reporting and export** — Customize your report views by day or month, revenue centre, and export in multiple formats or enable automatic email delivery.
- **Terminal estate review** — View and export a summary of the installed terminal estate, including location names and terminal IDs, ideal for compliance management.
